

## Hyacinthus

gradinar, Friday 11 July 2008 - 16:43:39

Zyumbyulat is known, common, Monocotyledon, proletrnotsafetyashto rastenie. Dal is the name of the family in which a member - this is his family name Zyumbyulevi. Latinskoto "Hyacinthus" comes from the name of a character in Greek mythology named Hyacinth - the son of the muse Clio and the king of ancient Macedonia name Pir. Proizhoshda part of the surrounding areas in the Caspian Sea, in areas of Iran and the Arab world Turkmenistan. V most - especially in Persia Zyumyubalt was extremely honored and valued plant that to this day retained its simbolika. Prorokat Mohammed said to him: "If I had only two piece of bread, I sold one to buy hyacinths, to feed my soul." this flower has long been popular in this area of Asia, but only about 3 centuries before Western Europeans have imported it in Europe, where to this day is very popular and growing body of rastenie. Podzemniyat hyacinth bulb is large, which completely smooth earning navan. Prez winter spring, when melt snow cover, along with many others, made this flower pochvata. Te its leaves are green above, with a smooth periphery, slightly fleshy, sessile and have parallel nervatura (zhilkuvane). Subsequently, from their starting center to be made large, flowering stem which is covered with numerous small flowers emit a strong, very nice aromat. Tyahnata structure includes 6 petals, 6 stamens and 1 pistil with superior zavraz. Chashelistcheta lipsvat. Bagrata is extremely raznobrazna. Mozhe be white, yellow, orange, but -- sinya. Imenno often thanks to its pleasant and sapor Zyumbyulat attracted much variety oprashvachi - bees, moths, flies with an elongated axis or oral apparatus is complete and dr. Sled bloom all above ground parts - leaves and flowers wither and opadat. Zhizneniyat cycle prikluchil. Semenata plant has been cast and the bulb remains in a period of rest until next season when ponikne. Zyumbyulat again, which is marketed by many species orientalis. Ima Hyacinthus hybrids, which have very large flowers in many diverse gama. Po color - popular varieties like Hyacinthus orientalis 'Delft Blue', blooming in the typical blue hyacinth, Hyacinthus orientalis 'Woodstock' in purple, Hyacinthus orientalis 'Jan Bos' in cherry, Hyacinthus orientalis 'City of Haarlem' in soft yellow and many others. dr. Dosta on - are little known species of Hyacinthus litwinowii and Hyacinthus transcasicus, which very rarely can be seen as decorative representatives.

Among the most attractive types are:

"Anna Marie" - soft pink, "Blue Jacket" - deep blue or purple, "Karnegie" - snow, "City of Harlem" - pale, "Jan Bos" - red with white center, "Lady Darby" - Pink " Lord Balfour "- violet, " Maria Christina "- peach.

Multiplication is performed similarly for all bulbs rasteniya. Parvata years on a bulb may have not one but two (sometimes more) sleeping papki. Ot them develop two separate plants that do form two completely separate, independent lukovitsi. Izvazhdato is , is given the necessary amount and returned to practice pochvata. Na plant only implemented the process and you must not act in any form nachin. Ponyakoga hyacinth and side of detki lukovitsata. Te be separated and planted individually.

Zatsaftyavat the second or third seed godina. Razmnozhavaneto also vazmozhen. Ako you plan to keep in practice napredvid neshta. Kogato several plant seed kutiki do well to keep the stem upright, without direct contact with soil, because it can rot and prezhddevremenno. Pri bursting their formation, then enriched with brown overblown Kristalon - NPK 12 - 12 - 36 + 1Mg, so that the flower seed to feed, sometimes I can uzreyat. Saberete them when the seed is dry and slightly kutiika burst.

Plants grow well in light sandy soil, fertilizing with manure ugnil and sunny, airy place. In heavy soils and wet bulb incorruptible. In our predominantly grown in pots. Flower requires sunny location, usually near the window. Needed is a good humidity, temperature to 15 degrees.

Native to the eastern Mediterranean and Central Asia.

Our country is grown in yards and some improved varieties reach 30 centimeters in height.

Keep hyacinths from strong light lunch! Having formed daughter corms (detki), they drop off carefully and kept separately. Detkite usually bloom the second-third year, when the pot in beds.
